Reasons for Allowance

Claims 15-16 and 39-86 have been found to be allowable. Within this claim set, claims 15, 39 and 72 are independent. The closest prior art is U.S. Patent 6,353,448 to Scarborough et al.

Claim 15: Claim 15 is addressed to a client system having a user interface, page profile module, controller, first interface and real time build module. Claim 15 differs from Scarborough in its recitation of a log module for recording client operation information, a configuration data module for determining a type of recording by the log module, the configuration data module storing client configuration information which defines client properties and a user profile module for processing a specific portion of log files stored in the log module to determine user specific information. Accordingly, claim 15 distinguishes from Scarborough et al.

Claim 39: Claim 39 is addressed to a system for providing web site information that includes a server, URL interface, updater module, page profile module and preview information archive. Claim 39 differs from Scarborough et al. in its recitation of a configuration data module for storing settings for determining when the updater module generates preview information requests; and a monitor/configuration control module receiving user statistic information, user profile information and configuration information. Accordingly, claim 39 distinguishes from Scarborough et al.

Claim 72: Claim 72 is addressed to a method of generating server preview information involving the steps of sending a preview information request to a server and forwarding client preview information to a page profile module. Claim 72 differs from Scarborough et al. in its

recitation of the step of determining whether the server is configured to save user ID and a URL field from a client, if the server is configured to save user ID and URL field sent from a client, then sending the ID and URL to a user database interface for recording in the preview information archive, else determining whether the server is set to supplement a list of URLs stored in a URL interface. Accordingly, claim 72 distinguishes from Scarborough et al.

Claims 15, 39 and 72 are allowed. Dependent claims 16, 40-71 and 73-86 are allowed.
